

# Project: Centralized RAN-Solution

## AimValley Solution

- Application software development based on AimValley software IP (AimOS)
- Architecture, development & project management
- Grassroots project: first release < 6 months
- Core team: ~6 software developers
- Engagement model: Fixed Price

## Key technologies:

- Fronthaul, CPRI, Ethernet, SNMP

## Customer Objectives

- Centralized RAN-solution for mobile backhaul and fronthaul network
- Interconnect all units via Ethernet, controlled by one central management unit

## Results & Added Value

|             |   |
|-------------|---|
| Efficiency  | Result of use of AimOS:<br>20% faster Time-to-Market, 20% cost reduction  |
| Successful  | Successfully deployed at leading global operators with high volumes. No issues, 7 major releases, 100% on-time delivery |
| Partnership | Development in close collaboration with multiple customer and partner teams worldwide                                   |
| Innovative  | Database handling/synchronization for multiple management interfaces and scalable design                                |
